Executive Summary	viii
Introduction	1
I. Reform Shocks to the Livestock Sector	3
Demand-Side Shocks	3
Supply-Side Shocks: Changing Terms of Trade	3
Intensifying Factors: A Look at Capital, Land, and Labor	6
II. Response at Primary Production Level	9
Structure of Production Under Communism	9
Changes in Farm Structure	10
Rise of Subsistence Agriculture	14
Declining Feeding Efficiency	14
Producer Response Linked to Farm Structure and Pace of Reform	14
The Rise of Commercial Farming	17
Polish and Hungarian Producers Begin to Specialize; Others Hedge Risk Through Diversification	18
Institutional Barriers Perpetuate the Problem of the “Missing Middle”	19
III. Downstream Sector	21
Privatization of State-Owned Purchasing and Processing Enterprises	22
Disintegration of Vertically Coordinated Marketing Chains	23
Producers Seek Alternative Marketing Channels	23
Specialization	23
Increasing Concentration and Reintegration	25
IV. What Are the Keys to Successful Restructuring?	30
What Accounts for the Success of Poland and Hungary?	30
But Unfinished Business Remains	31

V. Modeling Livestock/Poultry Production and Processing in Transition Economies	32
Introduction and Background	32
Model Overview and Sector Linkages	33
Technical Aspects of the Modeling Framework	34
Overview of Scenarios	35
VI. Scenario 1—Romania: What Is the Impact of Partial Removal of Subsidies?	37
Pork, Poultry, Dairy Output Fall, Beef Rises	37
Producers Switch to Nongrain Feeding	39
Commercial Producers Hit Harder	39
Conclusions	40
VII: Scenario 2—What Are the Benefits of Lowering the Barriers to Capital Flows?	41
Introduction and Background	41
Underdeveloped Financial Markets	41
Retained Earnings and Foreign Direct Investment	42
Implications of Developed Capital Markets and Increased Supplies of Financial Capital: Simulation Results	42
Reduced Credit Costs in Romania	43
Are Investment Returns Higher at the Production Level or at the Processing Level of the Marketing Chain?	44
Key Implications From the Investment Scenarios	48
VIII. Scenario 3—Can the Reduction of Marketing Costs Boost Livestock Output?	49
Introduction and Background	49
Marketing Margins: Definition and Use	49
Marketing Margins in Transition Economies	49
Supply-Side Factors Still Keep Margins High	50
Model Results	52
Summary: Key Results From Lower Marketing Costs in Russia, Ukraine, and Romania	55
IX: Scenario 4—How Will Better Functioning Land Markets Affect Animal Agriculture?	56
Land Reform Confers Property Rights	56

The Land Market in Transition Economies	57
Land Tenure and Economic Efficiency	57
Land Rights, Farm Organization, and Economic Efficiency	57
Modeling the Impact of Rising Land Prices in Hungary	58
X: Scenario 5—Can Growth in Nonagricultural Sectors Stimulate the Exit of Labor From Agriculture?	59
Russia and Romania: Higher Wages Lead to a Fall in Livestock Output	60
Poland	64
Conclusions	66
Some Caveats	67
XI: Conclusions	68
Successful Reform Does Not Necessarily Mean a “Recovery” of the Livestock Sector	68
The Livestock Sector Is the Farm Economy’s Shock Absorber	69
The High Cost of Credit Is Not as Serious an Impediment as High Marketing Costs	69
Investment in Meat Processing Brings Greater Returns Than Farm-Level Investment	69
Tradability Matters	70
Removal of Bottlenecks Brings Greater Benefits to Commercial Producers Than to Subsistence Producers	70
The Process of Drawing Excess Labor Out of Agriculture Will Be Slow	70
What About the Future?	70
Appendix: Model Structure and Data Sources	72
References	75
