

Appendix D

Detailed Tables

Chapter Two

Usual Intake of Food Energy and Nutrients

- Table D-1 - Percent of income-eligible older adults receiving benefits from the Food Stamp Program
Table D-2 - Percent of older adults receiving benefits from the Elderly Nutrition Program
Table D-3 - Distribution of older adults by household food sufficiency status
Table D-4 - Standard errors for distribution by household food sufficiency status
Table D-5 - Percent of older adults eating fewer than three meals per day
Table D-6 - Average number of meals consumed per day by older adults
Table D-7 - Percent of older adults who eat breakfast every day
Table D-8 - Percent of older adults eating at least one snack per day
Table D-9 - Average number of snacks consumed per day by older adults
Table D-10 - Mean usual intake of food energy in kilocalories: Older adults
Table D-11 - Mean usual intake of food energy as a percent of the 1989 Recommended Energy Allowance: Older adults
Table D-12 - Distribution of usual food energy intake in kilocalories: Older adults
Table D-13 - Mean usual intake of Vitamin C in milligrams: Older adults
Table D-14 - Percent of older adults with adequate usual intake of Vitamin C
Table D-15 - Distribution of usual Vitamin C intake in milligrams: Older adults
Table D-16 - Mean usual intake of iron in milligrams: Older adults
Table D-17 - Percent of older adults with adequate usual intake of iron
Table D-18 - Distribution of usual iron intake in milligrams: Older adults
Table D-19 - Mean usual intake of zinc in milligrams: Older adults
Table D-20 - Percent of older adults with adequate usual intake of zinc
Table D-21 - Distribution of usual zinc intake in milligrams: Older adults
Table D-22 - Mean usual intake of calcium in milligrams: Older adults
Table D-23 - Mean usual intake of calcium as a percent of Adequate Intake (AI): Older adults
Table D-24 - Distribution of usual calcium intake in milligrams: Older adults
Table D-25 - Prevalence of dietary supplement use in the past month among older adults
Table D-26 - Number of dietary supplements taken by older adults using dietary supplements in past month
Table D-27 - Standard errors for number of dietary supplements taken by older adults using dietary supplements in past month
Table D-28 – Types of dietary supplements taken by older adults using dietary supplements in past month

Chapter Three

Healthy Eating Index Scores and Usual Intake of Dietary Fiber

- Table D-29 - Total Healthy Eating Index score: Older adults
Table D-30 - Percent of older adults by Healthy Eating Index ratings
Table D-31 - Standard errors for percent of older adults by Healthy Eating Index ratings
Table D-32 - Healthy Eating Index component scores and food pyramid servings for grains: Older adults
Table D-33 - Standard errors for Healthy Eating Index component scores and food pyramid servings for grains: Older adults
Table D-34 - Healthy Eating Index component scores and food pyramid servings for vegetables: Older adults
Table D-35 - Standard errors for Healthy Eating Index component scores and food pyramid servings for vegetables: Older adults
Table D-36 - Healthy Eating Index component scores and food pyramid servings for fruit: Older adults
Table D-37 - Standard errors for Healthy Eating Index component scores and food pyramid servings for fruit: Older adults

- Table D-38 - Healthy Eating Index component scores and food pyramid servings for dairy: Older adults
 Table D-39 - Standard errors for Healthy Eating Index component scores and food pyramid servings for dairy: Older adults
 Table D-40 - Healthy Eating Index component scores and food pyramid servings for meat: Older adults
 Table D-41 - Standard errors for Healthy Eating Index component scores and food pyramid servings for meat: Older adults
 Table D-42 - Healthy Eating Index component scores for variety: Older adults
 Table D-43 - Standard errors for Healthy Eating Index component scores for variety: Older adults
 Table D-44 - Healthy Eating Index component scores for total fat: Older adults
 Table D-45 - Standard errors for Healthy Eating Index component scores for total fat: Older adults
 Table D-46 - Healthy Eating Index component scores for saturated fat: Older adults
 Table D-47 - Standard errors for Healthy Eating Index component scores for saturated fat: Older adults
 Table D-48 - Healthy Eating Index component scores for cholesterol: Older adults
 Table D-49 - Standard errors for Healthy Eating Index component scores for cholesterol: Older adults
 Table D-50 - Healthy Eating Index component scores for sodium: Older adults
 Table D-51 - Standard errors for Healthy Eating Index component scores for sodium: Older adults
 Table D-52 - Mean percent of usual energy intake from total fat: Older adults
 Table D-53 - Percent of older adults meeting Dietary Guidelines recommendation for usual intake of total fat
 Table D-54 - Distribution of usual intake of total fat as a percent of usual energy intake: Older adults
 Table D-55 - Mean percent of usual energy intake from saturated fat: Older adults
 Table D-56 - Percent of older adults meeting Dietary Guidelines recommendation for usual intake of saturated fat
 Table D-57 - Distribution of usual intake of saturated fat as a percent of usual energy intake: Older adults
 Table D-58 - Mean usual intake of cholesterol in milligrams: Older adults
 Table D-59 - Percent of older adults meeting Dietary Guidelines recommendation for usual intake of cholesterol
 Table D-60 - Distribution of usual intake of cholesterol in milligrams: Older adults
 Table D-61 - Mean usual intake of sodium in milligrams: Older adults
 Table D-62 - Percent of older adults meeting Dietary Guidelines recommendation for usual intake of sodium: Older adults
 Table D-63 - Distribution of usual sodium intake in milligrams: Older adults
 Table D-64 - Percent of older adults using table salt
 Table D-65 - Mean usual intake of dietary fiber in grams: Older adults
 Table D-66 - Percent of older adults with usual intake of dietary fiber at or above reference standard
 Table D-67 - Distribution of usual dietary fiber intake in grams: Older adults

Chapter Four **Other Measures of Nutritional Status**

- Table D-68 - Mean Body Mass Index: Older adults
 Table D-69 - Percent healthy weight: Older adults
 Table D-70 - Percent obese: Older adults
 Table D-71 - Percent overweight: Older adults
 Table D-72 - Percent underweight: Older adults
 Table D-73 - Mean weight gain over past 10 years: Older adults
 Table D-74 - Distribution of weight gain over past 10 years: Older adults
 Table D-75 - Mean weight gain since age 25: Older adults
 Table D-76 - Distribution of weight gain since age 25: Older adults
 Table D-77 - Mean difference between most ever weighed and current weight: Older adults
 Table D-78 - Distribution of difference between most ever weighed and current weight: Older adults
 Table D-79 - Percent of older adults who perceived themselves overweight
 Table D-80 - Percent of older adult males who perceived themselves overweight
 Table D-81 - Percent of older adult females who perceived themselves overweight
 Table D-82 - Percent of older adults who expressed a desire to lose weight
 Table D-83 - Percent of older adult males who expressed a desire to lose weight

- Table D-84 - Percent of older adult females who expressed a desire to lose weight
 Table D-85 - Percent of older adults who tried to lose weight in past 12 months
 Table D-86 - Percent of older adult males who tried to lose weight in past 12 months
 Table D-87 - Percent of older adult females who tried to lose weight in past 12 months
 Table D-88 - Percent of older adults with low serum albumin (conservative definition)
 Table D-89 - Percent of older adults with low serum albumin (liberal definition)
 Table D-90 - Percent of older adults with iron deficiency
 Table D-91 - Percent of older adults with low serum ferritin
 Table D-92 - Percent of older adults with high free erythrocyte protoporphorin
 Table D-93 - Percent of older adults with low transferrin saturation
 Table D-94 - Percent of older adults with iron deficiency anemia
 Table D-95 - Percent of older adults with low hemoglobin
 Table D-96 - Percent of older adults with low hematocrit
 Table D-97 - Percent of older adults with low red blood cell folate
 Table D-98 - Percent of older adults with low serum vitamin B₁₂
 Table D-99 - Percent of older adults with high total cholesterol
 Table D-100 - Percent of older adults with borderline-high total cholesterol
 Table D-101 - Percent of older adults with high LDL cholesterol
 Table D-102 - Percent of older adults with borderline-high LDL cholesterol
 Table D-103 - Percent of older adults with low HDL cholesterol
 Table D-104 - Percent of older adults with high triglycerides
 Table D-105 - Percent of older adults with reduced or severely reduced bone density
 Table D-106 - Percent of older adults with severely reduced bone density
 Table D-107 - Percent of older adult males with reduced or severely reduced bone density
 Table D-108 - Percent of older adult males with severely reduced bone density
 Table D-109 - Percent of older adult females with reduced or severely reduced bone density
 Table D-110 - Percent of older adult females with severely reduced bone density

Chapter Five **Health-Related Behaviors**

- Table D-111 - Distribution of older adults by number of different physical activities in the past month
 Table D-112 - Standard errors for distribution of older adults by number of different physical activities in the past month
 Table D-113 - Distribution of older males by number of different physical activities in the past month
 Table D-114 - Standard errors for distribution of older males by number of different physical activities in the past month
 Table D-115 - Distribution of older females by number of different physical activities in the past month
 Table D-116 - Standard errors for distribution of older females by number of different physical activities in the past month
 Table D-117 - Percent of older adults who walked a mile or more without stopping in past month
 Table D-118 - Percent of older males who walked a mile or more without stopping in past month
 Table D-119 - Percent of older females who walked a mile or more without stopping in past month
 Table D-120 - Percent of older adults reporting physical activity at least three times per week
 Table D-121 - Percent of older males reporting physical activity at least three times per week
 Table D-122 - Percent of older females reporting physical activity at least three times per week
 Table D-123 - Percent of older adults reporting physical activity at least five times per week
 Table D-124 - Percent of older males reporting physical activity at least five times per week
 Table D-125 - Percent of older females reporting physical activity at least five times per week
 Table D-126 - Physical activity level of past month compared to 10 years age: Older adults
 Table D-127 - Standard errors for physical activity level of past month compared to 10 years age: Older adults
 Table D-128 - Physical activity level of past month compared to 10 years age: Older males
 Table D-129 - Standard errors for physical activity level of past month compared to 10 years age: Older males
 Table D-130 - Physical activity level of past month compared to 10 years age: Older females

- Table D-131 - Standard errors for physical activity level of past month compared to 10 years age: Older females
 Table D-132 - Percent of older adults consuming at least 12 alcoholic beverages in their lifetime
 Table D-133 - Percent of older adults consuming at least 12 alcoholic beverages in past year
 Table D-134 - Mean number drinks consumed on average drinking day, among older adults consuming alcohol in past year
 Table D-135 - Percent of older adults who ever smoked
 Table D-136 - Percent of older adults smoking cigarettes in past 5 days
 Table D-137 - Percent of older adults smoking pipes, cigars or chewed tobacco in past 5 days
 Table D-138 - Mean number cigarettes smoking in past 5 days by cigarette smokers
 Table D-139 - Mean age became regular smoker: Older adults
 Table D-140 - Percent of nonsmoking older adults exposed to second hand smoke at home
 Table D-141 - Mean number cigarettes smoked per day in households where nonsmoking older adults reside with smokers
 Table D-142 - Percent of nonsmoking older adults with high serum cotinine levels
 Table D-143 - Percent of older adults talking on telephone with family, friends, neighbors every day, on average
 Table D-144 - Percent of older adults visiting friends or relatives at least once a week, on average
 Table D-145 - Percent of older adults visiting neighbors at least once a week, on average
 Table D-146 - Percent of older adults attending church at least once a week, on average
 Table D-147 - Percent of older adults belonging to clubs or organizations
 Table D-148 - Percent of older adults attending club or organization meetings at least once a month, on average
 Table D-149 - Percent of older adults residing at current address 10 years or longer
 Table D-150 - Percent of older adults residing at current address 20 years or longer

Chapter Six **Health Status, Conditions, and Risks**

- Table D-151 - Percent of older adults with self-reported general health status of very good or excellent
 Table D-152 - Percent of older adults with self-reported general health status of fair or poor
 Table D-153 - Percent of older adults with physician-reported general health status of very good or excellent
 Table D-154 - Percent of older adults with physician-reported general health status of fair or poor
 Table D-155 - Percent of older adults reporting high blood pressure
 Table D-156 - Percent of older adults with measured high blood pressure
 Table D-157 - Percent of older adults reporting diabetes
 Table D-158 - Percent of older adults reporting heart attack
 Table D-159 - Mean age at first heart attack among older adults reporting heart attack(s)
 Table D-160 - Percent of older adults reporting stroke
 Table D-161 - Percent of older adults reporting emphysema or congestive heart failure
 Table D-162 - Percent of older adults reporting cancer other than skin cancer
 Table D-163 - Mean 10-year risk of coronary heart disease among older adults
 Table D-164 - Percent of older adults with 10-year risk of coronary heart disease greater than 10 percent
 Table D-165 - Mean number of decayed, missing, and filled teeth: Older adults
 Table D-166 - Percent of older adults who ever visited a dentist or dental hygienist
 Table D-167 - Percent of older adults who visited a dentist or dental hygienist within the past year
 Table D-168 - Percent of older adults with physician-assessed difficulty or inability to walk 1/4 mile
 Table D-169 - Percent of older adults with physician-assessed difficulty or inability to run 100 yards
 Table D-170 - Percent of older adults with physician-assessed difficulty or inability to stoop, crouch, or kneel
 Table D-171 - Percent of older adults with physician-assessed difficulty or inability to perform small motor movements in hand
 Table D-172 - Percent of older adults with physician-assessed difficulty or inability to do heavy housework, garden, exercise, or play
 Table D-173 - Percent of older adults with self-reported difficulty walking 1/4 mile
 Table D-174 - Percent of older adults with self-reported difficulty walking up 10 steps without resting

Table D-175 - Percent of older adults with self-reported difficulty lifting or carrying 10 pounds
Table D-176 - Percent of older adults with self-reported difficulty doing chores around the house
Table D-177 - Percent of older adults with self-reported difficulty preparing meals
Table D-178 - Percent of older adults with self-reported difficulty managing money
Table D-179 - Percent of older adults with self-reported difficulty stooping, crouching, or kneeling
Table D-180 - Percent of older adults with self-reported difficulty walking from one room to another
Table D-181 - Percent of older adults with self-reported difficulty standing up from armless straight chair
Table D-182 - Percent of older adults with self-reported difficulty getting in or out of bed
Table D-183 - Percent of older adults with self-reported difficulty eating or drinking from a glass
Table D-184 - Percent of older adults with self-reported difficulty dressing
Table D-185 - Percent of older adults needing assistance with personal care needs
Table D-186 - Percent of older adults needing assistance with routine chores
Table D-187 - Percent of older adults using a cane, wheelchair, crutches, or walker
Table D-188 - Percent of older adults using special eating utensils
Table D-189 - Percent of older adults using aids or devices for help in dressing

Chapter Seven **Access to Health Care Services**

Table D-190 - Percent of older adults with any health insurance
Table D-191 - Percent of older adults with Medicare
Table D-192 - Percent of older adults with Medicaid
Table D-193 - Percent of older adults with CHAMPUS, CHAMPVA, VA, or military health care
Table D-194 - Percent of older adults with private health insurance
Table D-195 - Percent of older adults with a regular source of health care
Table D-196 - Percent of older adults who see a particular doctor
Table D-197 - Percent of older adults who saw a doctor within the past year

Table D-1—Percent of income-eligible older adults receiving benefits from the Food Stamp Program

	All older adults			Lowest income: ≤ 130% poverty		
	Sample size	Percent	Standard Error	Sample size	Percent	Standard Error

Notes: Significant differences in means and proportions are noted by † (.05 level), ‡ (.01 level), or §§ (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

¹ Estimated Average Requirements (EARs) were used to assess the adequacy of intake in groups. The EAR cut-point method was used for all groups except women age 9-50; the probability approach was used for women of childbearing age because the distribution of nutrient requirements is not symmetrical. See IOM, *Dietary Reference Intakes: Applications in Dietary Assessment*, Chapter 4.

EARs are defined separately for gender and age groups as listed in appendix B.

— Estimate of usual intake could not be obtained for the gender-age group cell. The cell was pooled with a neighboring age group to determine its contribution to the 'Total, age-adjusted' row.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFII).
 'All older adults' includes persons with missing income.

Notes: Significant differences in means and proportions are noted by » (.05 level), »» (.01 level), or »»» (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

The Bonferroni adjustment was used to adjust levels of significant and control for multiplicity in the number of tests.

– Estimate of usual intake could not be obtained for the gender-age group cell. The cell was pooled with a neighboring age group to determine its contribution to the 'Total, age-adjusted' row.

na EAR is specified for particular gender-age groups, but is not applicable to pooled data.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFII).

'All older adults' includes persons with missing income.

Notes: Significant differences in means and proportions are noted by † (.05 level), ‡ (.01 level), or §§ (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

¹ Estimated Average Requirements (EARs) were used to assess the adequacy of intake in groups, using the EAR cut-point method described in IOM, *Dietary Reference Intakes: Applications in Dietary Assessment*, Chapter 4. EARs are defined separately for gender and age groups as listed in appendix B.

² Because adequacy cutoffs vary by gender, estimates for both sexes were calculated outside C-SIDE as the weighted average of male and female estimates from C-SIDE.

— Estimate of usual intake could not be obtained for the gender-age group cell. The cell was pooled with a neighboring age group to determine its contribution to the 'Total, age-adjusted' row.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFII).

'All older adults' includes persons with missing income.

Notes: Significant differences in means and proportions are noted by $>$ (.05 level), \gg (.01 level), or \ggg (.001 level). Differences are tested in comparison to lowest income group (Income \leq 130% poverty).

The Bonferroni adjustment was used to adjust levels of significant and control for multiplicity in the number of tests.

— Estimate of usual intake could not be obtained for the gender-age group cell. The cell was pooled with a neighboring age group to determine its contribution to the 'Total, age-adjusted' row.

na EAR is specified for particular gender-age groups, but is not applicable to pooled data.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Food intake does not account for vitamin/mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intake of Individuals (CSFII).

Notes: Significant differences in means and proportions are noted by ‣ (.05 level), ‡ (.01 level), or *** (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

The Bonferroni adjustment was used to adjust levels of significant and control for multiplicity in the number of tests.

– Estimate of usual intake could not be obtained for the gender-age group cell. The cell was pooled with a neighboring age group to determine its contribution to the 'Total, age-adjusted' row.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFII).

'All older adults' includes persons with missing income.

Notes: * Denotes individual estimates not meeting the standards of reliability or precision due to inadequate cell size or large coefficient of variation.

Significant differences, compared to lowest income group, are noted by > (.05 level), >> (.01 level), or >>> (.001 level). The Bonferroni adjustment was used to adjust for the multiplicity of tests when examining multiple outcome categories.

Notes: Significant differences in means and proportions are noted by † (.05 level), ‡ (.01 level), or §§ (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty). The Bonferroni adjustment was used to adjust levels of significant and control for multiplicity in the number of tests.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFII).

'All older adults' includes persons with missing income.

Notes: Significant differences in means and proportions are noted by » (.05 level), »» (.01 level), or »»» (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty). The Bonferroni adjustment was used to adjust levels of significant and control for multiplicity in the number of tests.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFII).

'All older adults' includes persons with missing income.

Notes: Significant differences in means and proportions are noted by † (.05 level), ‡ (.01 level), or §§ (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).
– Estimate of usual intake could not be obtained for the gender-age group cell. The cell was pooled with a neighboring age group to determine its contribution to the 'Total, age-adjusted' row.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFII).
'All older adults' includes persons with missing income.

The Bonferroni adjustment was used to adjust levels of significant and control for multiplicity in the number of tests.

¹ Recommended fiber intake is 25 gm.

— Estimate of usual intake could not be obtained for the gender-age group cell. The cell was pooled with a neighboring age group to determine its contribution to the 'Total, age-adjusted' row.

na Fiber standard is specific to year of age and is not shown for the pooled age group.

Source: NHANES-III, 1988-94 Exam file, 24-hour dietary recall. Data reflect nutrient intake from foods. Does not include the contribution of vitamin and mineral supplements. Usual intake was estimated using C-SIDE: Software for Intake Distribution Estimation, accounting for within-person variance as estimated from the Continuing Survey of Food Intakes by Individuals (CSFI).

'All older adults' includes persons with missing income.

Notes: * Denotes individual estimates not meeting the standards of reliability or precision due to inadequate cell size or large coefficient of variation.

Significant differences in means and proportions are noted by † (.05 level), ‡ (.01 level), or §§ (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

¹ Overweight is defined by BMI greater than or equal to 25 and less than 30.

Source: NHANES-III, 1988-94: Examination file. The 'All older adults' column includes persons with missing income.

Notes: * Denotes individual estimates not meeting the standards of reliability or precision due to inadequate cell size or large coefficient of variation.

Significant differences in means and proportions are noted by > (.05 level), >> (.01 level), or >>> (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

¹ Sample is limited to persons in the examination sample because height and weight were measured during the MEC exam.

Source: NHANES-III, 1988-94: Adult interview file and Examination file. The 'All older adults' column includes persons with missing income.

Notes: * Denotes individual estimates not meeting the standards of reliability or precision due to inadequate cell size or large coefficient of variation.

Significant differences in means and proportions are noted by > (.05 level), >> (.01 level), or >>> (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

¹ Reduced bone density is defined as bone density of the proximal femur between 1 and 2.5 standard deviations below the mean of non-Hispanic white women 20-29 years of age, as measured by NHANES-III (density between .64 and .82). Severely reduced bone density is defined as more than 2.5 standard deviations below the mean for non-Hispanic white women 20-29 years of age (density < .64).

Notes: * Denotes individual estimates not meeting the standards of reliability or precision due to inadequate cell size or large coefficient of variation.

Significant differences, compared to lowest income group, are noted by > (.05 level), >> (.01 level), or >>> (.001 level). The Bonferroni adjustment was used to adjust for the multiplicity of tests when examining multiple outcome categories.

¹ Sample is limited to persons in the examination sample because height and weight were measured during the MEC exam.

Source: NHANES-III, 1988-94: Adult interview file and Examination file. The 'All older adults' column includes persons with missing income.

Notes: * Denotes individual estimates not meeting the standards of reliability or precision due to inadequate cell size or large coefficient of variation.

Significant differences, compared to lowest income group, are noted by > (.05 level), >> (.01 level), or >>> (.001 level). The Bonferroni adjustment was used to adjust for the multiplicity of tests when examining multiple outcome categories.

¹ Sample is limited to persons in the examination sample because height and weight were measured during the MEC exam.

Source: NHANES-III, 1988-94: Adult interview file and Examination file. The 'All older adults' column includes persons with missing income.

Notes: * Denotes individual estimates not meeting the standards of reliability or precision due to inadequate cell size or large coefficient of variation.

Significant differences in means and proportions are noted by † (.05 level), ‡ (.01 level), or §§ (.001 level). Differences are tested in comparison to lowest income group (Income ≤ 130% poverty).

1 Persons are identified as nonsmokers if they answered no to all four types of nicotine exposure in past 5 days: cigarettes, cigars or pipes, chewing tobacco or snuff, and nicotine gum.

2 Persons are identified as smokers if they reported smoking cigarettes in the past 5 days.

— Data not available.

Source: NHANES-III, 1988-94: Examination sample. Smokers are identified from the MEC file; exposure is determined from the adult and youth interview files. The 'All older adults' column includes persons with missing income.
