Forestland a Big Draw for Rural Living

While considerable attention is paid to the creation of rural jobs, much of current rural growth has resulted from the attraction of people to features of the rural outdoors. Topography and climate are relatively fixed, but other aspects, such as the mix of forest and open country and access to the outdoors are amenable to Federal policies, but generally ignored by them. Most counties with little or no forest are in the **Great Plains** or the Corn Belt Population loss has been associated Some counties with with a lack of forest, little forest have but some heavily gained population forested counties through an influx of have also lost Hispanic immigrants population Land in forest (%) associated with changes in agriculture Over 85 Population loss each 40 to 65 decade since 1980

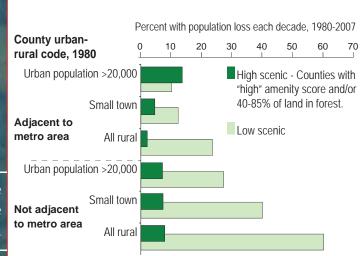

Forestland Can Overcome an Area's Lack of Innate Natural Amenities

Likewise, the presence of forest cover and/or innate amenities can help retain population even among the most rural counties, which otherwise tend to lose it.

Even counties lacking in innate natural amenities are perceived as more desirable places to live when the landscape offers a mix of forest and open country.

Few Scenic Counties Losing Population

It seems likely that a natural park may sometimes do more for local development and well-being than an industrial park.
