The United States produces 23 types of tobacco divided into eight major classes of tobacco. Tobacco is used for cigarettes, cigars, chewing tobacco, snuff, pipe tobacco, and roll-your-own cigarettes. The United States is both the largest importer and exporter of tobacco and the second largest producer, behind China. This bulletin presents statistics for tobacco dating from 1935 for some variables. Data are presented for the United States and by State for all types. Major areas covered are tobacco product output and consumption, leaf acreage, yield, production, price and value by type and State, and supply and disappearance of leaf by type of tobacco. Other statistics include data on prices, expenditures, Government revenues from tobacco products, farm and leaf processing size and structure, and tobacco program features such as price supports, marketing quotas, and assessments. Foreign production, exports, imports, and consumption of both leaf and tobacco products for selected countries are also presented. U.S. leaf and tobacco product trade with selected countries is also detailed.

### Abstract

Tobacco, the sixth largest cash crop grown in the United States, is cultivated in 21 States. The United States produces 23 types of tobacco divided into eight major classes of tobacco. Tobacco is used for cigarettes, cigars, chewing tobacco, snuff, pipe tobacco, and roll-your-own cigarettes. The United States is both the largest importer and exporter of tobacco and the second largest producer, behind China. This bulletin presents statistics for tobacco dating from 1935 for some variables. Data are presented for the United States and by State for all types. Major areas covered are tobacco product output and consumption, leaf acreage, yield, production, price and value by type and State, and supply and disappearance of leaf by type of tobacco. Other statistics include data on prices, expenditures, Government revenues from tobacco products, farm and leaf processing size and structure, and tobacco program features such as price supports, marketing quotas, and assessments. Foreign production, exports, imports, and consumption of both leaf and tobacco products for selected countries are also presented. U.S. leaf and tobacco product trade with selected countries is also detailed.

**Keywords:** Tobacco, production, supply, disappearance, price, utilization, world trade

### Acknowledgments

The authors wish to thank the following reviewers for their comments and suggestions: Peter Burr, Larry Crabtree, Frederic Hoff, Max Loyd, Robert H. Miller, Will Snell, and Dan Stevens. The authors especially appreciate the excellent editorial services provided by Sharon Lee and the assistance of Kyra Toland and Wynnic P. Napper in preparing this report. Cover design by Joan A. Van Chantfort.

## Summary

The United States is the world's leading tobacco exporter and importer and the second largest tobacco producer behind China. Tobacco is grown in 21 States, with about two-thirds of the crop grown in North Carolina and Kentucky. Total U.S. production has declined about 20 percent since 1975. Cigarettes make up about 90 percent of U.S. tobacco use. Per capita use in the United States peaked in 1963 at 4,345 cigarettes and has fallen steadily since then to 2,640 in 1992.

This report charts the Nation's tobacco production, consumption, imports, exports, and the ins and outs of various government programs dealing with tobacco production from the mid-1930's.

The United States leads tobacco exports because U.S. leaf is considered the highest quality. Although U.S. leaf exports have fallen since the early 1960's, their value has increased about 170 percent. U.S. exports to Turkey, Spain, Italy, and Japan rose, but those to traditional European markets, including the Netherlands, and Germany fell.

Worldwide cigarette consumption is rising. To meet that increase, U.S. cigarette exports increased sixfold between the mid-1970's and 1992, allowing U.S. cigarette production to remain relatively high. Pacific Rim countries edged out Middle Eastern and European countries as the major destination of U.S. cigarette exports.

Even though cigarette consumption is declining in the United States, U.S. consumers annually spend record amounts on tobacco products. Expenditures rose more than fourfold from 1970 to 1992. Prices of tobacco products rose two to three times faster than the consumer price index during the last decade.

The United States dominates imports because U.S. cigarette manufacturers require types of tobacco not grown in the United States, and they use cheaper foreign leaf as filler for cigarettes. Many producing and exporting countries, including Italy, China, Malawi, and Brazil, increased production more than 100 percent during 1970-92. The United States was the only major producer with reduced production. Imported cigarettes constitute less than 1 percent of U.S. cigarette consumption.

Tobacco farms are becoming larger, although tobacco is still grown primarily by small family farms. As labor and other costs have risen, growers have mechanized some operations. Labor use has fallen in the last two decades, although tobacco remains a labor-intensive crop. Labor reductions have not fully offset rising input costs, and production costs continue to rise.

Farm receipts for tobacco averaged \$3,890 per acre in 1992, compared with \$200 per acre for corn and soybeans.

## Introduction

Tobacco is used for cigarettes, cigars, chewing tobacco, snuff, pipe tobacco, and roll-your-own cigarettes. Tobacco is the Nation's sixth largest cash crop behind corn, soybeans, wheat, cotton, and hay. The United States is both the world's leading tobacco exporter and importer and the second largest tobacco producer, behind China.

This report presents historical statistics on tobacco for selected years, beginning as early as 1935 for some variables. Such variables as cigarette production, taxable removals, cigarette consumption, other tobacco product production and consumption, tobacco leaf acreage, yield, production, price, value, tobacco program components, and exports and imports are included. Many other items such as wholesale and retail cigarette prices, world leaf and cigarette production, and U.S. production costs are also included to meet the needs of those requiring a single comprehensive source of tobacco data.

The data presented in this bulletin originated from a number of different sources. Primary among U.S. Department of Agriculture (USDA) data sources are reports of the National Agricultural Statistics Service, Agricultural Marketing Service, Foreign Agricultural Service, and Agricultural Stabilization and Conservation Service. Data from the Bureau of Alcohol, Tobacco, and Firearms (U.S. Department of the Treasury) and the Bureau of Labor Statistics (U.S. Department of Labor) were also used extensively. Data from other private sources such as the Tobacco Institute and Tobacco Merchants Association of the United States, as well as other private and Government sources, were used.

This report complements and extends data in the Economic Research Service's quarterly *Tobacco Situation and Outlook Report* and other reports such as *Tobacco Statistics* by USDA's Agricultural Marketing Service. Tables 59-130 provide a continuous historical series of some data from 1866 to 1992. Earlier data were published in *Tobacco, United States and State Estimates, 1866-1965, Type and Class Estimates, 1919-65*, Statistical Reporting Service, Crop Reporting Board, Statistical Bulletin No. 454, June 1970.

## Brief History of Tobacco

Tobacco is a member of a large family of plants chiefly tropical in origin, known as the *Solanaceae*, or potato family. Tobacco belongs to the genus *Nicotiana*. There are about 50 species in the genus.

Although much has been written about tobacco, authentic information on its early history is limited. However, there were numerous reports of tobacco cultivation and use in the late 1400's and early 1500's. West Indian natives and North and South American Indians grew and used tobacco in various forms.

The tobacco the early American settlers found growing in the Indian villages along the James and Rappahannock Rivers and other parts of Tidewater Virginia was a strong tobacco belonging to *Nicotiana rustica* L., believed to have originated in Mexico or Central America. English merchants preferred Spanish leaf, a milder and more aromatic variety of *Nicotiana tobacco* L., which had been used in Europe and Great Britain 20 years before the colonies were founded. John

Rolfe began the commercial cultivation of tobacco at Jamestown, Virginia, in 1612, and its culture became more common in the colony by 1616. Tobacco soon became a valuable export commodity because of the large quantity that could be produced per acre and its strong market in Great Britain.

Tobacco production spread to Maryland, New York, Pennsylvania, and Connecticut in the 1600's. Virginia and Maryland, however, produced most of the tobacco grown in the colonies through the end of the 1700's. A number of States began producing tobacco after the Revolutionary War. Twenty-one States now grow tobacco. Since the late 1930's, when most tobacco came under the price support and production control program, the location of production has changed little. About two-thirds of total leaf production is in North Carolina and Kentucky.

### Tobacco Product Output and Consumption

Cigarettes are the primary product made from tobacco, accounting for about 90 percent of the tobacco used in the United States. U.S. consumption of cigarettes grew steadily until 1981, but has since fallen (fig. 1). Per capita cigarette consumption reached a peak of 4,345 pieces in 1963 and then fell steadily to 2,640 in 1992 (fig. 2).

The kinds of cigarettes Americans smoke has changed markedly since 1950. Americans have changed from unfiltered to filtered cigarettes. About 97.5 percent of cigarettes produced in the United States were filter-tipped by 1992, compared with 1 percent in 1950. Lower tar and nicotine cigarettes have become more prevalent as manufacturers shifted blends, used more efficient filters, and changed the air content of smoke.

The share of the population that smokes is declining, and the U.S. Department of Health and Human Services and voluntary health agencies are continuing efforts to discourage smoking. Price increases by manufacturers to maintain or enhance profits and to cover increased costs and higher excise taxes are reducing consumption. Restrictions on where people can smoke and growing social unacceptability of cigarette smoking are also holding down consumption. Cigarette exports have increased in recent years, which has allowed U.S. cigarette production to remain relatively high. Cigarette taxes are being increased and large additional proposed increases are linked to Federal health care reform considerations.

Consumption of cigars, chewing tobacco, and smoking tobacco (pipe and roll-your-own) is also declining (fig. 3). Only snuff consumption has increased in recent years. Greater snuff consumption results from the growing number of restrictions on smoking, effective industry promotion, and possibly a waning effect of warning labels, tax hikes, and negative publicity.

### Tobacco Acreage, Yields, Production, Prices, Supplies, and Use

Tobacco acreage grew until the early 1950's and remained relatively high through the mid-1950's, but declined steadily during the late 1950's and 1960's (fig. 4). Acreage expanded from 1972 to 1975, but declined steadily until 1986 before increasing again.

Tobacco yields rose considerably from the 1940's to 1965. Yields then stabilized after changes in the Government program regulating tobacco production (fig. 6). Controls for flue-cured (the dominant type of tobacco) changed from acreage to acreage-poundage controls, with poundage becoming the effective constraint on production in 1965. Controls on burley production shifted from acres to pounds in 1971.

Tobacco farms are becoming larger, although tobacco is still grown primarily by small family farms. As labor and other costs have risen, growers have mechanized some operations. Even though labor use has fallen the last two decades, tobacco remains a labor-intensive crop. Labor reductions have not fully offset rising input costs, and production costs continue to rise.

Tobacco has high receipts per acre compared with other crops. Gross receipts per acre averaged \$3,900 in 1992, compared with about \$200 for corn and soybeans. Prices of leaf have generally risen, reflecting provisions of the Federal price support program and supply and demand. Average grower prices are somewhat higher than the average support level, reflecting the variations in supply and demand of different qualities of tobacco.

Prices of tobacco products have risen two to three times faster than the consumer price index (CPI) during the last decade (fig. 7). Despite declining consumption of cigarettes and most other tobacco products, U.S. consumers annually spend record amounts on tobacco products.

Supplies and use of leaf have declined. During the last two decades, a greater share of the leaf used in cigarettes has been imported. Leaf use per cigarette declined from the 1950's to the 1980's because of the use of filters and other leaf-reducing technologies.

### The Federal Tobacco Production-Price Support Program

Most tobacco grown in the United States has been under a price support-production control program since the early 1930's. A number of legislative changes have been made in the program, but its major purpose continues to be to guarantee growers minimum prices and provide an adequate and balanced flow of tobacco.

The program does not authorize direct Government payments to tobacco producers or manufacturers. Rather, loans are made to producer-owned cooperative associations which, in turn, make advance payments to growers for tobacco that does not sell for at least the established price support rate.

To be eligible for program benefits, tobacco growers must contribute to an overall account, which was established to ensure the operation of the tobacco price support program at no-net-cost to the taxpayer. The Omnibus Budget Reconciliation Act of 1990 provides that growers and buyers of each kind of tobacco pay an assessment on sales of 1991-95 tobacco crops equal to 0.5 percent of the national support level. In recent years, the Federal Government has spent \$25 million-\$60 million a year for administering the price support program and providing a variety of research, marketing, and information services to tobacco growers. These costs are not reimbursed from no-net-cost accounts, but still represent a small fraction of Government expenditures on agricultural programs (figs. 8 and 9).

In 1986, major changes were made in the earlier laws with respect to the tobacco program. The changes are improving the program operation by providing more market-oriented price support levels and marketing quotas. Surplus tobacco stocks have been reduced sharply and the volume of tobacco being placed under loan has declined.

### World Tobacco

Tobacco was first produced in North America but since pre-colonial times has spread throughout the world. It is a high-value crop in many countries and is an important source of revenue for farmers worldwide. Many countries produce tobacco primarily for export, while many consuming countries produce little or no tobacco. The United States is an exception, however, and is both the largest exporter and importer of tobacco. Since most tobacco products consist of blends of different types and qualities of leaf, countries that are producers of one type of tobacco may still import other types. Worldwide consumption of tobacco is rising.

## Trends in World Tobacco Production, Trade, and Consumption

World tobacco production has tripled since 1960 (fig. 10). Many producing and exporting countries, including Italy, China, Malawi, and Brazil, increased production more than 100 percent during 1970-92. The United States was the only major producer with decreased production.

Since the early 1960's, major exporters such as Brazil, Malawi, and Italy also had large increases in exports, while U.S. exports declined slightly. The U.S. share of trade lagged, falling from 26 to 15 percent of the world total, as world exports jumped 74 percent. Excluding China's production, about 40 percent of the world harvest is traded on the international market.

Globally, consumption of leaf tobacco increased about 75 percent since the early 1960's, mostly due to increased cigarette production. World cigarette consumption rose nearly 150 percent from the early 1960's to 1992 (fig. 12). The proportion of cigarettes that were exported increased eightfold. The United States is the largest exporter of cigarettes.

Throughout the 20th century, cigarettes have been supplanting other tobacco products as the major form of consumption. Cigars, and pipe and chewing tobacco have declined in importance.

### U.S. Trade

The United States is both the world's largest exporter and importer of leaf tobacco. It leads in exports because its leaf is considered to be the highest quality. It dominates imports because U.S. cigarette manufacturers require types of tobacco not grown in the United States, and they use cheaper foreign leaf as filler for cigarettes.

Although U.S. exports have fallen since the early 1960's, their value increased about 170 percent (fig. 13). U.S. exports to Turkey, Spain, Italy, South Korea, and Japan rose, and those to traditional European markets, including the Netherlands and Germany, fell. Tobacco products are a bright spot in the Nation's trade balance.

Leaf imports to the United States more than doubled since 1980 (fig. 14). Turkey was the major supplier of Oriental tobacco throughout the period, along with Yugoslavia, Brazil, and Greece. Imports from Argentina and Italy rose during the 1970's and 1980's.

Cigarette trade is an important component of the U.S. tobacco industry. Exports increased sixfold between the mid-1970's and 1992 (fig. 15). Pacific Rim countries edged out some Middle Eastern and European nations as major destinations for U.S. cigarettes during 1970-92.

Imported cigarettes constitute less than 1 percent of U.S. cigarette consumption. Canada and the United Kingdom account for over 90 percent of cigarettes exported to the United States.

1/ Includes large cigars and cigarillos.

2/ Total removals (or sales) from U.S. factories plus those from Puerto Rico and imports, minus exports.

3/ Puerto Rico no longer reported separately. Taxable removals include United States and Puerto Rico combined.

Sources: Publications and reports of the U.S. Department of Treasury's Bureau of Alcohol, Tobacco, and Firearms and the Internal Revenue Service, and U.S. Department of Commerce's Bureau of the Census.

\*\* = Not applicable.

1/ Includes leading brands. A 3-percent discount is made for payment within 10 days or 2 percent within 14 days.

2/ Effective January 1, 1983, the Federal excise tax doubled to \$8.00 per 1,000 cigarettes.

3/ Manufacturers increased prices by a different amount. The change shown represents a major manufacturer whose prices were between the highest and lowest.

4/ The January price increase brought major manufacturers' prices in line.

5/ Generic cigarette prices are about 35 percent lower than those listed and mid-priced brands are about 15 percent lower.

6/ Some manufacturers raised prices by a smaller amount.

7/ Effective January 1, 1991, the Federal excise tax increased to \$10.00 per 1,000 cigarettes.

8/ Numbers in parentheses indicate a range in prices.

9/ Effective January 1, 1993, the Federal excise tax increased to \$12.00 per 1,000 cigarettes.

-- = Not available.

1/ Includes large cigarettes.

2/ Includes small cigars and revenue on cigars from Puerto Rico.

3/ From 1950 to 1965, includes Federal excise tax on chewing and smoking tobacco and snuff. This tax was repealed effective January 1, 1966. A Federal excise tax was reinstated on snuff and chewing tobacco effective July 1, 1986. From 1966, includes cigarette paper and tubes and imported cigarettes and cigars.

4/ From 1950 through 1963, excludes local government.

5/ Preliminary.

1/ Beginning in 1986, tobacco industry data is no longer reported separately. Tobacco data included with food industry data. Major merger and acquisition activity resulted in reclassification of a significant portion of gross receipts and assets from tobacco to food. The remainder, comprised of data from highly specialized tobacco manufacturers, is too small to be considered publishable as a separate industry category.

2/ Industry classification changed and foreign subsidy omitted beginning 1975. Excise taxes excluded beginning 1979.

Sources: Compiled from the Quarterly Financial Reports for Manufacturing Corporations, Federal Trade Commission and Securities and Exchange Commission.

	Pounds per acre				
Yield	2,129	2,219	2,069	2,253	2,206

1/ Includes operator, family, exchange, and hired labor valued at prevailing hired wage rates.

2/ Includes custom costs if they could not be separated.

3/ Includes plant bed seed, fertilizer, pesticides, fumigants, and purchased plants.

4/ Includes insecticides, herbicides, fungicides, pesticides, and growth regulators. Also includes custom costs if they could not be separated.

5/ Includes plant bed and land preparation, transplanting, field care, harvesting, hauling, and other custom work.

6/ Includes rental values of housing, personal property, utilities, drinks, snacks, and field toilets.

7/ Includes tractor, machinery, and irrigation fuel and lubrication.

8/ Includes cost of L.P. gas, fuel oil, or diesel, and electricity used to cure tobacco.

9/ Includes machinery, equipment, irrigation, and barn repairs.

10/ Includes sheets, sticks, and twine.

11/ Weighted average of cash and share rents.

Yield	1,975	2,204	2,110	2,143	1,975	2,204	2,110	2,143

1/ Preliminary.

2/ Includes operator, family, exchange, and hired labor valued at prevailing hired wage rates.

3/ Includes rental values of housing, personal property, utilities, drinks, snacks, and field toilets.

4/ Includes custom costs if they could not be separated from the fertilizer and lime costs.

5/ Includes plant bed seed, fertilizer, pesticides, fumigants, and purchased plants.

6/ Includes custom costs if they could not be separated from the chemical costs.

7/ Includes tractor, machinery, and irrigation fuel and lubrication.

8/ Includes cost of L.P. gas, fuel oil, or diesel fuels.

9/ Includes machinery, equipment, irrigation, and barn repairs.

10/ Marketing assessment began with the 1991 crop.

11/ Includes operating interest charged on all variable cost items except operator and family labor, marketing fee, no-net-cost assessment, and inspection and grading fee.

12/ Includes items such as sticks, twine, cover crop seed, and baling supplies.

13/ Weighted average of cash and share rented quota.

\*\* = Not applicable because quota set at zero.

1/ Excludes loan outlay reductions under the Gramm-Rudman-Hollings Act, 1986-90.

2/ The marketing year begins July 1 for flue-cured and October 1 for other types.

3/ No support. Growers disapproved quotas.

4/ Types 42-44 support levels only.

5/ Effective support of \$1.65 by reduction in some grades.

\*\* = Not applicable.

1/ Omits high and low years.

2/ 1986 support level set by Public Law 99-272, April 7, 1986.

3/ The support rate is the moving 5-year average of auction prices omitting high and low years (66.7 percent weight) and change in cents per pound of annual index of tobacco producers' costs of production (33.3 percent weight). The law provides the Secretary of Agriculture discretionary authority to change the price support from 65 to 100 percent of the calculated change dictated by the two-part formula.

4/ Revised to reflect data for entire year.

\*\* = Not applicable. Puerto Rican quota set at zero. Cigar binder types 51-52 growers disapproved marketing quotas.

1/ Reduced from 30 cents to 4 cents a pound under legislation signed November 15, 1985.

2/ Producer assessments. Purchasers contributed 1-1/2 cents per pound of flue-cured and 1-1/4 cents per pound of burley in 1986/87.

3/ Purchasers assessed a similar amount.

4/ Includes budget deficit assessment. Purchasers assessed a similar amount.

5/ Owners of farms who leased and transferred marketing quota were required to contribute 7 cents per pound of quota transferred.

6/ Full 25 cents rebated to buyers.

7/ No-net-cost assessment only.

1/ Imports for consumption (duty paid) of leaf, scrap, and manufactured or unmanufactured (beginning 1980), prorated according to reported stocks of imported flue-cured and burley.

2/ Marketing year beginning October 1.

3/ General imports adjusted for stock change.

4/ Volume inspected by Agricultural Marketing Service adjusted for stock change.

Table 185--U.S. tariff rates on selected tobaccos and tobacco product imports, 1992

Kind of tobacco	Rates of duty (General)
I. Unmanufactured tobacco	Cents per pound
threshed or similarly processed; tobacco refuse:	
A. Tobacco, not stemmed/stripped:	
Containing over 35 percent wrapper	36.0
Containing less than 35 percent wrapper	
Cigarette leaf-Oriental or Turkish	11.5
Cigarette leaf-other including flue-cured, burley, Maryland	12.75
Other leaf, including cigar binder and filler, fire-cured, and blackfat	16.1 + 19.9 on wrapper tobacco content
B. Tobacco, partly or wholly stemmed stripped, not threshed or similarly processed:	
Leaf tobacco, the product of two or more countries or dependencies, when mixed or packed together	292.5
Containing over 35 percent wrapper	62.1 + 92.5 on filler content
Containing less than 35 percent wrapper flue-cured, burley, Maryland, cigar binder and filler, fire-cured, blackfat, and other	20.0 + 42.1 on cigar wrapper content
C. Threshed or similarly processed:	
From cigar wrapper leaf	16.1
From other leaf including flue-cured, burley, Maryland, fire-cured, blackfat, and cigar filler and binder	20.0
D. Tobacco refuse:	
Tobacco stems, not cut, ground, or pulverized	free
Tobacco stems, cut ground, or pulverized	54.9
Other refuse	16.1
II. Manufactured products:	
A. Cigars, cheroots, and cigarillos containing tobacco:	
Each valued at less than 15 cents	191.0 + 10.5 percent
Each valued at 15 cents or over but less than 23 cents	57.2 + 3 percent
B. Cigarettes:	
Regular paper-wrapper (containing tobacco)	106.1 + 2 percent
Clove (containing tobacco)	42.0 + 2 percent
Other cigarettes (containing tobacco)	106.1 + 2 percent
Other cigarettes (not containing tobacco)	106.1 + 2 percent
Other manufactured tobacco and manufactured tobacco substitutes; "homogenized" or "reconstituted" tobacco; tobacco extracts and essences.	
Smoking tobacco, whether or not containing tobacco substitutes in any proportion	17.5
Other "homogenized" or "reconstituted" tobacco suitable for use as wrapper	62.1
All other "homogenized" or "reconstituted" tobacco	20.0
Other including chewing tobacco, snuff, snuff flour, bulk smoking tobacco, etc.	17.5

**SUMMARY OF REPORT AIB-682**

# Slow Turnover in Ownership of U.S. Farmland

September 1993

Contact: Gene Wunderlich, 202-219-0425

Only about 3.5 percent of farmland changes hands each year, according to a new report by USDA's Economic Research Service, *Acquiring Farmland in the United States*. Despite the relatively low turnover rate, the amount and value of land transferred each year is substantial. Twenty-nine million acres, valued at \$21 billion, were transferred in 1988, according to the Census of Agriculture's Agricultural Economics and Land Ownership Survey (AELOS).

About half of the farmland transferred in 1988 was purchased from a nonrelative. Another 18 percent was purchased from relatives. The remaining 31 percent of farmland was transferred through inheritance, gift, and other methods.

Farm operators acquired a higher proportion of their farmland through purchase than did owners who are not farm operators. Women, who dominate the nonoperator-owner category, acquired more of their land through inheritance and gifts than did men. Method of farmland acquisition varies among racial groups. However, white owners hold 99 percent of the farmland.

## Individuals and Families Own Most U.S. Farmland

By far, the largest class of farmland owners (86 percent) is individuals, including husband/wife combinations. But the population of owners is aging and the reduction in numbers is enlarging the average holding. If landownership patterns continue, the proportion of farmland held by older, nonoperator owners will grow, while the total number of owners declines. If the number of owners shrinks while the amount of farmland remains constant or decreases slowly, the average holding will increase.

Farmland is distributed among 2.9 million owners, according to AELOS. Farmland ownership is concentrated; less than 2 percent of the population own all U.S. farmland, which itself accounts for two-thirds of the Nation's private land. Four percent of farmland owners hold 47 percent of the farmland, while 30 percent hold only 2 percent. The distribution of farmland, however, has not changed appreciably since midcentury.

Method of acquisition by class of owner, 1988<sup>1</sup>  
*Market-driven land purchases were less frequent among nonoperator owners.*

Method	Farm operator owners	Nonoperator owners	Percent	
Purchase from nonrelative	67	48		
Purchase from relative	32	23		
Inheritance/gift	21	43		
Other	5	5		

<sup>1</sup> Respondent may have acquired land by more than one method.

### To Order This Report...

The information presented here is excerpted from *Acquiring Farmland in the United States*, AIB-682. The cost is \$7.50.

Dial 1-800-999-6779 (toll free in the United States and Canada) and ask for the report by title.

Add 25 percent to foreign addresses (including Canada). Charge to VISA or MasterCard. Or send a check (made payable to ERS-NASS) to:

ERS-NASS  
341 Victory Drive  
Herndon, VA 22070.
