## U.S. Net Textile and Apparel Imports Climb Higher in 2014

U.S. net textile and apparel fiber imports rose for a second consecutive calendar year in 2014 to their highest level since 2010. Total fiber product imports reached 18.2 billion raw-fiber-equivalent pounds in 2014, 3 percent above 2013 and the highest since 2010. Total product exports advanced 1 percent in 2014 to more than 3.7 billion pounds, the largest since 2008. As a result, U.S. net textile and apparel product imports reached nearly 14.5 billion pounds in 2014, compared with 13.9 billion pounds in 2013 and a record 15.1 billion pounds in 2007 (fig. 1).

U.S. net imports consist largely of cotton and manmade fiber products, but cotton's share has declined in recent years as manmade fiber use has grown steadily. In 2014, cotton textile and apparel products accounted for about 46 percent of the total, while manmade fibers contributed 47 percent. By comparison, just 5 years ago, cotton contributed nearly 56 percent of the total compared with manmade fibers' share of 38 percent.

Cotton and Wool Chart Gallery will be updated on March 16, 2015  
-----  
The next release is April 13, 2015  
-----  
Approved by the World Agricultural Outlook Board

## U.S. Cotton Supply and Demand Unchanged in March

The U.S. cotton crop for 2014/15 remains estimated at 16.1 million bales (upland at 15.5 million bales and extra-long staple at 588,000 bales), compared with last season's 12.9-million-bale crop. (USDA will release its next *Cotton Ginnings* report on March 25th and the final U.S. cotton production estimate for the 2014 crop on May 12th.) Based on the current crop estimate and beginning stocks of nearly 2.5 million bales, the 2014/15 cotton supply totaled 18.5 million bales, 11 percent above a year ago but considerably below the previous 5-year average of 20.3 million bales.

Total U.S. cotton demand is estimated at 14.35 million bales, 2 percent above 2013/14. The U.S. mill use forecast this month remains at 3.65 million bales, 100,000 bales higher than last season. Similarly, U.S. cotton exports are projected at 10.7 million bales, nearly 2 percent above 2013/14.

Through the first 6 months of 2014/15, U.S. textile mills used 1.7 million bales of cotton (according to data collected by USDA's Farm Service Agency), slightly below the amount used during the first half of 2013/14. However, cotton mill use has risen in recent months and is expected to improve further in the second half of the season to reach its highest level in 4 years.

U.S. cotton exports in 2014/15 are forecast about 200,000 bales above last season, due mainly to a global shortage of high-quality machine-harvested cotton. Despite foreign import demand at a 6-year low—largely due to lower import demand by China—the U.S. share of world trade is forecast at 31 percent, 5 percentage points above 2013/14 (fig. 2).

Figure 2  
**U.S. cotton exports and share of global trade**

Source: USDA, *World Agricultural Supply and Demand Estimates* reports.

U.S. cotton export commitments through the first 7 months of 2014/15 have reached 9.9 million bales. Shipments, however, have only approached 4.9 million bales—or 46 percent of the current forecast—as supplies available for export were limited during the first half of the season. A year ago at this point in the marketing year, shipments of 5.9 million bales accounted for 56 percent of final 2013/14 exports. To reach this season’s export estimate of 10.7 million bales, shipments need to average approximately 264,000 bales per week, compared with the 282,000-bale average shipped during the past 8 weeks.

### ***Stocks Rise in 2014/15; Average Farm Price Lower***

With U.S. cotton production exceeding demand in 2014/15, ending stocks are forecast to increase. For 2014/15, U.S. stocks are projected at 4.2 million bales, nearly 1.8 million bales (71 percent) above the beginning level and the highest since 2008/09. Based on the latest supply and demand estimates, the 2014/15 stocks-to-use ratio is projected to climb from 17 percent in 2013/14 to 29 percent, the highest in 6 years.

The average price received by U.S. upland cotton producers is expected to decrease from 2013/14’s 77.9 cents per pound. Lower prices are prevailing this season, with the 2014/15 upland price projected to range between 59 and 62 cents per pound. At the midpoint of 60.5 cents per pound, prices would be the lowest since 2008/09.

### ***U.S. Retail Cotton Consumption Nearly Unchanged in 2014***

U.S. domestic cotton consumption (mill use plus net textile imports) was marginally lower in calendar year 2014, surpassing 8.3 billion (raw-fiber-equivalent) pounds, or about 17.3 million bale-equivalents (fig. 3). The 2014 level represented a 1-percent reduction from 2013 and was the second lowest retail cotton consumption estimate since 1996. Cotton has lost share to manmade fibers in apparel and other product construction over the last several years. As a result, 2014 U.S. domestic cotton consumption was 23 percent below its 2006 peak of 10.9 billion pounds, or 22.6 million bale-equivalents.

Cotton product trade was mixed in calendar year 2014. U.S. cotton product imports reached 8.4 billion pounds, marginally below 2013. On the other hand, cotton product exports were slightly higher in 2014, as the volume approached 1.8 billion pounds. Meanwhile, U.S. cotton mill use declined slightly to 1.7 billion pounds in 2014. As a result, the per capita estimate of retail cotton consumption was also slightly below a year ago, declining half a pound to nearly 26 pounds, with mill use of cotton contributing just over 5 pounds of the total.

### ***World 2014/15 Cotton Production Nearly Unchanged in March***

World cotton production this season is forecast at 119.2 million bales, virtually unchanged from last month's projection and slightly below 2013/14. Higher area this season is offset by a lower yield. Global harvested area in 2014/15 is estimated at 34.1 million hectares (84.4 million acres), nearly 1.4 million hectares (3.4 million acres) above the previous season. The global yield is forecast at 760 kg per hectare (678 pounds per acre), compared with 800 kg per hectare (714 pounds per acre) for the previous season.

India and China are the top two cotton producers. In 2014/15, India's production is forecast at 30.5 million bales, about 2 percent below 2013/14. A reduction in yield—returning to average levels—more than offsets a 1-million-hectare increase in area to a record 12.7 million hectares. China's cotton crop is expected to reach 30 million bales this season, 8 percent below 2013/14 and the second consecutive annual decline. Total area is projected at 4.4 million hectares, the lowest since 2000/01. As cotton area moves out of eastern China to the higher yielding western region, the increased productivity has limited the effect of lower area on production.

Production declines are also forecast for the Southern Hemisphere. Brazil's cotton crop is expected to decrease about 13 percent to 7 million bales, resulting from lower area and yield. Australia's production in 2014/15 is projected to decline by nearly half to 2.2 million bales as dry conditions and depleted irrigation supplies reduce area for the third consecutive season.

Offsetting these declines are production increases in countries that devoted more area to cotton in 2014/15. These countries include the United States (+3.2 million bales), Pakistan (+1 million bales), and Turkey (+0.9 million bales).

### ***Global Cotton Trade Down in 2014/15***

World cotton trade is projected to decline significantly for the second consecutive season as China continues to import less raw cotton. Global cotton exports are forecast at 34.4 million bales in 2014/15, 6.3 million bales (15 percent) below last season. India—a large raw cotton supplier to China last season—is expected to bear the brunt of this season's reduced shipments. India is projected to export only 4.2 million bales in 2014/15, compared with nearly 9.3 million bales last season. Australia's exports are also projected about 2 million bales lower due to their reduced crop.

Despite significantly lower imports, China will remain the leading cotton importer in 2014/15. Imports by China are expected to reach 7.3 million bales this season, nearly half the level imported in 2013/14. Offsetting a portion of this decline, however, is the growth in other importing countries such as Vietnam, Bangladesh, and India.

## World Cotton Mill Use and Ending Stocks to Increase

Global cotton consumption in 2014/15 is forecast at 111.0 million bales, down slightly from last month's projection but nearly 2 percent above the previous season. China continues as the world's leading spinner, accounting for approximately one-third of the global mill use of cotton. In 2014/15, China is expected to use 35 million bales of cotton, slightly above last season but well below the record of 51 million bales used in 2007/08. A substantial portion of the loss in domestic cotton spinning has been replaced by imports of cotton yarn; in 2014/15, China could import more than 9 million bale-equivalents of raw fiber in the form of cotton yarn, nearly triple the level imported just 4 years ago.

Cotton mill use in India—the second largest spinner—is expected to expand for the third consecutive year. In 2014/15, India's cotton consumption is forecast at 24 million bales, up from about 23.4 million bales last season. India's growth has been supported by expanding cotton yarn exports to China, where India has become a leading supplier. Cotton mill use in Pakistan is also benefiting from China's yarn imports; in 2014/15, Pakistan's mill use is forecast at 10.5 million bales, up slightly from last season. In Vietnam, cotton consumption is projected to approach 3.7 million bales this season, more than double the level of just 3 years ago as yarn exports have also benefited the textile sector.

Despite rising cotton consumption, world production is expected to exceed mill use for the fifth consecutive season. Based on the March world cotton supply and demand estimates, 2014/15 global ending stocks are forecast at a record 110.1 million bales, 8 percent above a year ago and more than double the level in 2010/11 (fig. 4). In addition, cotton stocks at the end of 2014/15 are projected to approximate a year's worth of global consumption. As a result, world cotton prices are expected to decrease to a level not seen since 2008/09.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, SW, Washington, DC 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

### E-mail Notification

Readers of ERS outlook reports have two ways they can receive an e-mail notice about release of reports and associated data.

- Receive timely notification (soon after the report is posted on the web) via USDA's Economics, Statistics, and Market Information System (which is housed at Cornell University's Mann Library). Go to <http://usda.mannlib.cornell.edu/MannUsda/aboutEmailService.do> and follow the instructions to receive e-mail notices about ERS, Agricultural Marketing Service, National Agricultural Statistics Service, and World Agricultural Outlook Board products.
- Receive weekly notification (on Friday afternoon) via the ERS website. Go to <http://www.ers.usda.gov/subscribe-to-ers-e-newsletters.aspx> and follow the instructions to receive notices about ERS outlook reports, Amber Waves magazine, and other reports and data products on specific topics. ERS also offers RSS (really simple syndication) feeds for all ERS products. Go to <http://www.ers.usda.gov/rss/> to get started.
